

TARGET 100,000 CROWNCAPS

Hello partners,

As you know, we are reorganizing the crowncaps validation team and the validation criteria too. We're doing this to make it much easier for you to do so and I encourage you to contribute crowncaps to the page's database.

The criteria that will be applied to accept crowncaps uploaded to validate is:

-You can take images from the same or other websites, as long as the image shown is the same as the crowncap to be uploaded.

-A template will be created for the description, so it will be very fast to fill in the data. It is very important that the description is simple. We don't want literature. Most of the text that is in the descriptions is not useful to find them. You must think how you would look for it if you had it in front of you and this is how you have to define it.

-With this report we attach a video showing how to edit the photos. **WE DON'T WANT TO BE PURISTS.** We just want the photo to look good. For this reason, in the video you will see that with only 1 minute the photo is edited and it's good enough to be uploaded for validation.

When the team of validators is organized, we will send a report so everyone knows who validates and which crowns validates. This way, if you have any doubt you can directly contact them instead of using the forum, where the messages don't always arrive to them.

We all have many non-validated crowns and you should think that validated crowns are an improvement for our page. A good for all. You will see that it is very simple and fast.

TARGET: 100,000 CROWNS
